

## ROCKWHEEL SERVICE DOCUMENT

### G40 & G60 Drum Greasing Instructions

#### Tools needed

- Grease gun
- Bar as leverage to turn the drums 1/4 turn

1. Identify the grease port on the Drum Cap (opposite the breather plug).

*Grease port*

2. Pump grease until you see it coming out of either the breather on the end cap or out of the space between the drums and housing.

3. Rotate the drums 90° and repeat 3 times until the entire drum is properly greased

*Breather plug. Grease may come through*

*Proper greasing: coming out between the drum and housing*
